

# Urban Forests, Society, and Climate Change

FREE WEBINAR

## Urban forests, society, and climate change - Understanding an essential forest landscape as both a tool and liability.

Lauren T. Cooper directs the Forest Carbon and Climate Program for Michigan State University Forestry Department and has experience in forest carbon project development, urban planning, policy analysis, and wood utilization linkages to sustainability. She works with the State of Michigan on Natural and Working Land climate initiatives to support understanding of climate change mitigation and adaptation to climate impacts, including in urban forests. She is currently co-chairing the Natural and Working Lands work group of the Governor's Council on Climate Solutions.

Topics to include:

- Valuing the urban forest in the face of climate change
- Climate threats
- Urban forests and carbon storage
- Setting ambitions for the urban forest
- Urban forest resiliency in a changing climate

**\*\*ISA and SAF credits pending\*\***
