

# Michigan Native Trees in the Landscape

Tips for Making the Most of Native Plant's Best Qualities

## FREE HOMEOWNER PRESENTATION

### Native Plants: What do you have and what should you get?

By definition, a "native" plant is one that is living, growing, and reproducing naturally in a particular region. Many people are surprised to learn how many plants (trees, shrubs, flowers) already in our gardens and yards are native to Michigan, and how many more there are that can add beauty and other endearing qualities. Discussion will include what makes a tree 'native' and when they are best used or when a non-native would better suit the goal.

Gary Eichen, Certified Arborist and Assistant Service Line Director for Plant Health Care and Lawn Care for SavATree LLC, gives you tips for making the most of native plants' best qualities: lower maintenance, less disease and pest problems and more wildlife.

All are welcome.
